Scaltinof

White Paper ver.1.1

ABOUT

What is Scaltinof

Scaltinof, conceived in the June of 2018, is the alternative cryptocurrency developed in Japan. It is based on the popular ASCII art character, Aramaki Scaltinof.

Scaltinof is an Ethereum token based on the ERC20 / ERC223 standard. We dev team is targeting for Scaltinof to be utilized in varied ways as an original cryptocurrency.

The project is developing a business aiming at social contribution based on the concept of “change the future with CSR”.

Constructing a community system using block chains, through Scaltinof even more, with people It is a bridge that connects people, people and society, aiming to become a better world.

Scaltinof extends its partners not only in CSR business but also in various fields (creative, shopping / event etc.)

For example, it is easy to make payment at Scaltinof and donate easily to people and organizations who are not able to finance it.

* Scaltinofproject also has no relation to any current or previous members of 2channel (now 5channel) management nor its associated companies.

PURPOSE

Scaltinof contributes to society through CSR and builds brand power that is familiar to many people.

And we will aim at cryptocurrency that we will walk with everyone.

We will also consider and provide transparent project management and tie-ups with various technology developers and various utilization methods in the future.

Business contents

The core business of Scaltinof is CSR (Social Contribution Project).

We will continue our activities mainly by contributing to people and society.

Donation and disaster support can be cited as familiar usage methods.

We provide a cloud-funding type system that supports people and organizations.

We are also planning to provide payment systems that can be used in systems that can be received, shopping / events and so on.

Brand building

Currently, the cryptocurrency has increased to more than a few thousand and is in saturation. In addition to growing with practical value and function alone, topicality and brand power are necessary.

Scaltinof puts the theme of building brand power as the theme, and develops to the existence that is aligned with MonaCoin.

In addition, we aim for coins loved by everyone regardless of gender, from children to adults.

Operating organization

The Scaltinof Project adequately discloses the operating agencies and locations, and operates highly transparent. Also, by disclosing the management organization, the location of responsibility is clarified.

In the technical field of this project, we are cooperating with coin engineers, SE and web engineers, and we can expect sustainable development in the future.

PROJECT

The core business of Scaltinof is CSR (Social Contribution Project). We will continue our activities mainly by contributing to people and society.

We introduce the project project operated by Scaltinof Project.

Cloud funting type system

We operate a cloud-funding type system that allows people, organizations who need assistance, people who want to do business to collect funds using cryptocurrency.

The cryptocurrency is possible from a small amount of remittance and can directly send money to individuals and organizations.

This property is also an effective means for cloud funding and donation.

For example, even if you are a person in a country far away, you can send it at any time without worrying about the fee with a small amount, even if you know the other's wallet address. We do not go through bank accounts.

Also, if you examine the address you can find out how much the cryptocurrency you remitted gathered, you can understand the flow of funds and support highly transparent.

SNS type system

In the project we will operate a system related to SNS. Building SNS is a profile open type and anyone can access without logging in.

We are specializing in expertise by narrowing down the genre, for example, company type SNS where many freelancers can belong, SNS where people with the same troubles gather, SNS that can exchange token and coin, and information can be shared Various social media We will operate.

These systems are deployed through the Scaltinof Project so we can expect customers' attractiveness. By participating, you can receive tokens as rewards or use them within the community.

Like MonaCoin, Scaltinof supports the development and use of various services by users. We are aiming for a cryptographic currency that the community is also the subject of development and can continue to develop.

We also collaborate with each company to promote event utilization, practical use, and technology development.

The operation of Scaltinof is initially led by us, but to maintain the operation of Scaltinof permanently without directly intervening the ultimate goal.

CHARACTERISTIC

Scaltinof features

- TokenName: Scaltinof
- TokenSymbol: SCAL
- PublishNumber: 30,000,000,000

Scaltinof is an Ethereum token based on the ERC223 standard and is the first cryptocurrency developed in Japan.

While ERC20 is currently the most popularized form of Ethereum tokens, ERC233 is gaining attention as an upwardly compatible standard that revises on ERC20's flaws, such as fixing the issue in which tokens can no longer be transferred in the event one sends funds to an incorrect or invalid contact address.

Additionally, with the specification change, tokens can also be transferred at half the cost of the ERC20. ERC223 is backwards compatible with ERC20, making it available for use in ERC20-supported service tools and wallets such as MyEtherWallet, MetaMask, and Mist.

ERC233 also carries the big plus of being scheduled for use with revolutionary services like Raiden and Plasma in the near future.

Using the ERC233 standard as a base, Scaltinof comes mounted with many features. For example, using the Airdrop feature included, users can distribute tokens to multiple people simultaneously via Airdrop while keeping transfer fees low.

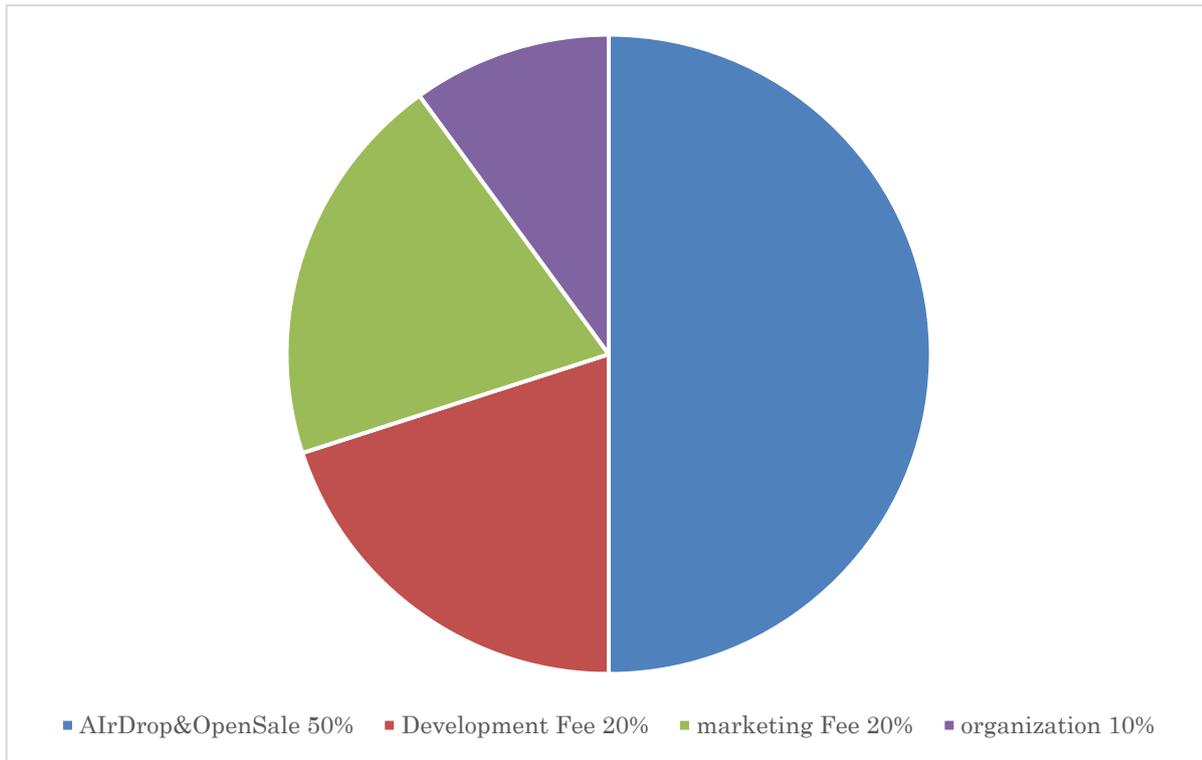

Furthermore, since this feature is available to everyone, Scaltinof holders can use Airdrop at any time. On top of that, account freeze and lockup features are also included.

The ability to freeze the addresses of malicious users and temporarily lock management-held tokens allows us to both maintain and increase Scaltinof's value.

Additionally, the number of tokens in circulation can be adjusted through the Burn (decrease) and Mint (increase) features. The Mint feature can also be turned off forever.

Token Allocation

Most of the virtual currencies thus far have vague denitions of the requirements, such as possessing a "majority", to become the "management team". Therefore, for clarity, the minimum required possession percentage of Scaltinof to function as the aforementioned management team is set to be 10% of the total.

The benet of declaring this percentage is that even if the management team sells out, the market will not collapse because the managing team does not hold the majority. Certainly, there will be a secondary countermeasure of requiring the holder to clearly state that it is not their intent to disturb the market by undercutting or overselling.

Following the opening Sale, we plan to sell 15 billion SCAL, which is 50% of the total issued volume. Likewise, after the opening, burns and lockups will be implemented for unsold tokens.

Regarding exchanges

Scaltnof aims to be listed on multiple exchanges overseas.

We will apply to exchanges dealing with many stocks.

In addition, at the time of initial listing, it will be distributed on the selling board at 1 satoshi at the exchange. (Scheduled at the present time)

In addition, we aim for 1 SCAL = 30satoshi or more as a price target to be reached.

SCHEDULE

2018.6.1~9.30

- Token issue
- AirDrop start
- Establishment of website and various SNS
- White paper released
- Exchange listed (The first)

2018.10.1~12.31

- Publish beta version of various IT business
- Exchange listed (The second)

2019.01.1~03.31

- Develop various IT businesses

* Schedule is planned.

GOAL

Scaltinof develops with everyone, while contributing to society with CSR as the core, we will work on daily basis to become a coin loved from all over the world.

“The future can be changed”

I will continue doing my best to the utmost so that each person’s thoughts and actions will bear fruit and serve people and society.
